retractable shade solution

Choose the convenience of a pole or cord retraction system.

wave shade.

retractable shade solution

Enjoy the best of both worlds, sun when you want it and shade when you need it with a retractable Wave Shade. Made up of a series of billows, Wave Shades are perfect for windy locations, made to withstand the harshest conditions and extremely low maintenance. Retract in a matter of minutes and secure or unclip to store or clean.

Residential

Maximise your space with an outdoor room to extend your living space or transform your patio into a shady entertaining area.

Commercial

Popular at bars, cafes and vineyards, Wave Shades enhance the dining experience by creating a more relaxed, comfortable climate for customers.

at a glance.

- ▶ 5 year Warranty
- ▶ Retractable
- ▶ Easy to Clean
- ▶ Fade Resistant
- ▶ 85-100% UV Block
- ▶ Marine-Grade Hardware
- ▶ Made to Measure
- ▶ Premium Fabric
- ▶ Windy locations
- ▶ Easy to Use
- ▶ Fully Customisable
- ▶ Indoors or Outdoors

Fabric.

5 yr Fabric Warranty

Soltis 96 is a quality, modern fabric providing top-end performance. This fabric has a 4% openness factor for breath-ability to reduce heat. This fabric is the lightest in our range, and designed to drape beautifully. A double thickness solar protective coating extends this fabric's life, helping your Wave Shade look better, for longer.

When we say we are experts, we mean it. That's why we stand by all Canopi shades with 5-10 year warranties on the shade, fabric and hardware.

There is a waterproof option, however this is not designed to be a permanent shelter & must be retracted when not in use. It will alter the price and installation requirements.

Choose from a low, medium or deep billow to customise your look.

Crafted using marine-grade stainless steel hardware, suitable for coastal locations.

We recommend keeping each shade under 15m² or shading your space by more than one shade.

customise.

always made to measure

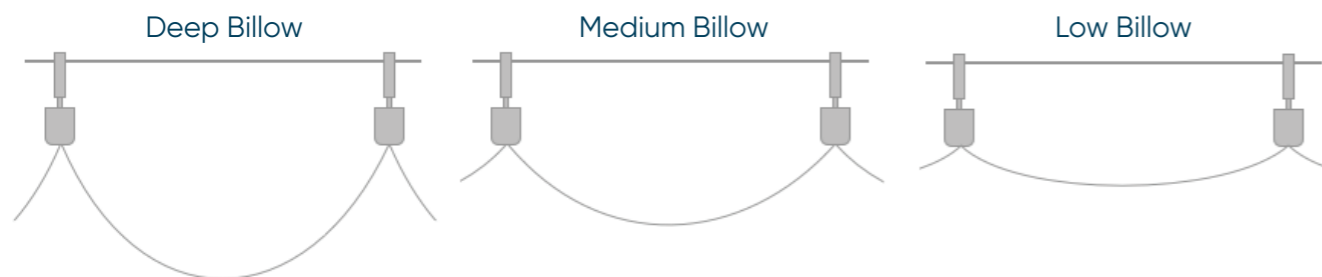

Drop.

The drop refers to the amount the fabric hangs down below the wire cable when the shade is retracted. The standard drop is 450mm. If there is some restriction below your shade, for example a door or window, you will need to specify the maximum drop. We can reduce the drop by adding additional spars. 280mm is the minimum drop you can achieve. This may alter the price.

Billow.

The billow refers to the amount of fabric that hangs down below the wire cable when the shade is extended. Medium Billow is the standard choice, however you can customise your shade to have a Shallow Billow if you prefer a more flat look or you may choose a Deep Billow if you want the fabric to hang down lower.

Cord Retraction.

The cord retraction option operates on stainless steel pulleys and polyester braid. It works like a blind pulling one side of the cord loop to retract and pulling the other side to extend your shade. This system allows you to lock off the Wave Shade when it's halfway open.

Pole Retraction.

The pole retraction system (pictured) works with an aluminum pole that hooks to a stainless steel cleat on the front spar of the Wave Shade to manually extend & retract.

Supporting Structure It is important that your support structure is strong enough to support the highly tensioned cables for your Wave Shade. We suggest minimum 100x100 wooden beams or steel with deep footings in concrete, such as a professionally built pergola structure. Wave Shades can be fixed directly to a house but must have structural support behind. We recommend Wave Shades are no larger than 15m².

we believe shade
has the power to
activate better,
healthier space
for living.
